

COLLETTE CAPITAL

COLLETTE CAPITAL WHOLESALE IMA STRATEGY

APRIL 2023

THE STRATEGY

The investment objective of the Collette Capital Wholesale IMA strategy (the Strategy) is one of absolute returns irrespective of prevailing market conditions. The exposure set may skew net long or net short.

Macro-economics, fundamental research, and technical rationale (price action) are all inputs into the decision making process of the Strategy.

In all instances the client remains the beneficial owner of all positions.

An IMA or Individually Managed Account is an account service where all investment decisions are outsourced to the manager.

PERFORMANCE

Disclosure:

Performance is un-audited and is based on an actual client account which began in the IMA service on the 22 January 2015.

Percentage returns have been calculated using the Time Weighted Return (TWR) method.

The Time Weighted Return (TWR) method allows the calculation of returns according to the amount invested on any given day – excluding cash.

Please see page 3 for further information on TWR.

PERFORMANCE FIGURES

Through the month of April versus the ASX Small Ordinaries Accumulation Index (XSOAI), net of all costs.

	April	FY23	FY22	FY21	Inception p.a.
CC Wholesale IMA Strategy	+8.55%	+6.81%	+27.98%	+60.79%	+24.18%
Small Ords Accumulation Index	+2.78%	+12.07%	-19.52%	+33.23%	+7.51%

All information and advice is confidential and for the private information of the person to whom it is provided without any responsibility of liability on any account whatsoever on the part of this firm of any member or employee thereof.

PORTFOLIO MANAGER'S COMMENTS

The Strategy gained +8.58% in the month of April, against a benchmark of +2.78%.

The bulk of gains came from WMG – Western Mines Group – an emerging nano-cap nickel play – whose results for their Mulga Tank project finally garnered attention.

The stock advanced on the month from 14c to 68.5c, and that despite a small placement that was completed intra-month at 34c.

The Strategy had been a holder of the bulk of this position from IPO.

The other most significant contributor on the month was that of RAD – Radiopharm, which has now completed a compelling basing pattern from a technical perspective, and further is enjoying the success of sector heavyweight TLX – Telix which has advanced to a valuation of 3.3b.

In the short term, the largely if not universal bearish positioning of marginal market participants, at least as stated, is something of an impediment to meaningfully bearish outcomes being realised.

A recession may well be on its way, but it might also just be the most anticipated recession in modern history.

On the assumption that it arrives, there will be days when the market wakes up and takes bad news as bad news.

But that was not the case in April, and the U.S. economy continues to confound to the upside on several important economic measures, leaving the door ajar to the 'no landing' scenario, or at the very least the absence of a complete capitulation in equities within 2023.

The key risk to equities in the short term may not come from recessionary impulses nor debt ceiling negotiations, but rather from the constraint of liquidity as created by technical variations in accounting at the Fed and within the machinery of the financial system, in particular the treasury general account and reverse-repo facility.

Please note that IMA clients without an Animoca exposure were down meaningfully in FY22 and in some cases on an horizon of over a year.

As ever, the one true and explicit arbiter of performance – PRICE – remains at the forefront of the Strategy.

Whilst any number of narratives will always be available to engage in - that seek to explain what is happening in the market – at the end of the day we can only ever trade in 'price'.

Price has no knowledge of the narratives that supposedly explain it, and so rigour around this input, and the management of risk strictly thru this prism, is the foundational pillar upon which the Strategy operates.

KEY INFORMATION

Risk Rating	High
Benchmark	ASX Small Ords Accumulation Index
Inception Date	22 January 2015
Management Company	Collette Capital Pty Ltd
Portfolio Manager	Steve Collette
Management / Performance Fees	Nil
Brokerage Fees	\$75 or 0.5%, whichever the greater
Clearing Agent	FinClear Execution Limited
Reporting	Praemium Limited (\$300.00 per annum + GST)

Additional Disclosure with reference to TWR method of calculating return:

The Time Weighted Return (TWR) method allows the calculation of returns according to the amount invested on any given day – excluding cash.

In so doing it does not take into effect the amount of any cash that the client or account is holding on any given day.

This has the effect of amplifying stated positive or negative returns relative to dollar outcomes in any period where the client is not 100% invested and so is holding no cash.

In simple terms, this means that if the client offers an investment of \$300k in the Strategy and has a stated return of 15% over a given period net of all costs but has only averaged 50% drawn down (50% cash), then the return will have been +\$22,500 as opposed to +\$45k for that period.

However, the opposite would also be true if the stated return were -15% under TWR, the loss will have been -\$22,500 as opposed to -\$45k for that period.

The TWR method is used in calculating returns for Collette Capital Wholesale IMA Strategy because the client account upon which the reporting is based has historically settled to an external bank account.

Incoming clients should know that use of the TWR method in their instances will take into account any cash on deposit at CMA, as all incoming clients are required to have excess funds on deposit at CMA.

A detailed explanation of the TWR method for calculating returns is available here:

<https://au.praemium.help/home/twr-percentage-return-calculations-in-the-investment-movements-report>

All trades that have contributed to the stated return are available upon request.

Additional Disclosure with reference to the Performance Figures:

The performance figures are based on an account with \$475,000 in the Strategy as at the start of January 2023, in addition to a residual holding in Animoca Brands currently valued at \$829,674. The amount that this account has made available to the Strategy has changed over time and since inception. The minimum to participate in the Strategy is \$100,000. As at the start of January 2023, accounts considered to make available or be likely to make available to the Strategy an amount between \$100,000 and \$200,000, will hold a smaller position set, which may not include the same composition as that held within the account and / or position set used to calculate the performance figures. Owing to that, and / or in the absence of a holding in Animoca Brands, returns on those accounts will vary from those included in this report.

Incoming accounts do not have the existing position set of the Strategy replicated, rather they receive the next position the Strategy acquires from their start date. This also has the effect of varying returns on new accounts from the returns included in this report. Investment performance includes dividends (but not franking credits) and is calculated net of all fees. Past performance is not a reliable indicator of future performance. Individual IMA Strategy results will differ depending on committed funds, start date, brokerage, fees and taxes. Quoted returns are based upon a client account which has historically operated with a brokerage charge of \$75 or 0.5% whichever the greater, and no management fee. At times the manager will vary the brokerage down in the client's favour, but never up.
